

Bio-Más G

Net weight 25 Pounds

Bio-Más G is a unique blend of plant derived amino acids, plant hormones, humic and fulvic acids, cytokinins, carbon, stimulants and numerous essential and beneficial elements for optimal plant growth and vigor.

Directions for use: Uniformly apply **Bio-Más G** in 1- 2 gallons of water per thousand square feet at a rate of 1.0 pound per acre every 10-14 days to turfgrasses, ornamental and annual plantings when growing conditions exist. It is beneficial to lightly water-in **Bio-Más G** within 24 hours or prior to mowing. Minimal agitation is required. Do not mix with hot water or allow solution in tank to rise above 90 degrees. Use 50 Mesh screen or coarser.

Disclaimer: It is impossible to test this product on all turfgrasses, ornamental and annual plantings. Therefore, eliminating all risks of usage associated with this product is not possible. Before treating, a preliminary trial is suggested on a small scale before a full treatment is applied. Wait 5 to 7 days after treatment to evaluate results. **Bio-Más G** may be tank mixed with many commonly used fertilizers, including micro-nutrient combinations. If **Bio-Más G** is tank mixed with commonly used agricultural herbicides, fungicides, insecticides and plant growth regulators the end user assumes all responsibility for any damage or injury that may occur. A compatibility "jar test" should be evaluated prior to tank mixing any product with **Bio-Más G**.
