

COMANDSCAPE - Premium Landscape Soil

New Product

Comandscape is a professional grade potting and landscape soil, which utilizes the biological power of Comand®

It can be utilized as a direct growing media in planting beds and in outdoor and indoor planters

Comandscape is an extremely versatile product with a specially blended formula for promoting strong and healthy plant growth

It contains composted pine bark and high quality compost products stabilized through the use of a proprietary composting process, known as the MSAP Method, developed by Harvest Quest.

The product is carefully processed through several phases of curing to maintain excellent soil building attributes and a remarkable abundance of beneficial microorganisms.

- Greatly improves the soils ability to absorb and store water, providing greater drought resistance and more efficient water utilization
- Encourages vigorous root growth
- Supplies beneficial microbes to the soil
- Aids the proliferation of soil microbes

- Supplies organic matter
- Improves plant survival & growth rates

The presence of soil organisms is essential for productive soils and healthy plants. The organic matter in **Comandscape** is home to diverse populations and adds high quality organic matter to soil, increasing its quality and long-term success

Product Range	
Comandscape ½"	Fine grade ideal for small containers and bedding plants
