

Golf Ventures CACONDITIONER

**Increases water penetration and drainage by loosening compacted soils
Decreases harmful excess salts | Safe and environmentally friendly**

Venture CAConditioner is a hyper-concentrated formulation engineered to reduce excess sodium content in soil, whilst increasing water penetration by loosening compacted media. Due to these soil-loosening properties, Venture CAConditioner also greatly improves soil drainage, which can provide relief to waterlogged turf and crops.

The hyper-concentrated nature of Venture CAConditioner makes the treatment of compacted soil, easier and less expensive than ever before; a single gallon of Venture CAConditioner contains more available calcium than 800 pounds of granular gypsum. Additionally, Venture CAConditioner leverages potent wetting agent technology to increase its penetration power and overall efficacy.

APPLICATION:

1 quart of Venture CAConditioner contains more available calcium than 200 pounds of dry gypsum. Application rates will be contingent upon soil analysis.
